Abstract (Basic): KR 2003025353 A

NOVELTY - A system and method for intermediating a picture using the Internet is provided to enable an author to receive a sufficient royalty and sell contents as a reasonable price by possessing property and permitting to copy and distribute a digital copy and to enable a purchaser to purchase a high-quality picture at low cost and conveniently.

DETAILED DESCRIPTION - The Internet(100), an artist computer(200), a purchaser computer(300), an agency computer(400), and a picture intermediating server(500) capable of managing requested conditions are provided. A picture information database(562) stores a picture and picture information received from a linked picture supply site. A picture frame information database(564) stores picture frame information classified by sizes, kinds, and materials. A member information database(566) stores information with respect to an artist, a purchase, and an agency member. A purchase information database(568) stores purchase information. A web server(520) accesses the databases by responding to a request of a member computer connected to the picture intermediating server(500), and transmits transmission-requested information by an exclusive protocol. A mail server(540) transmits purchase information including picture information to the agency computer(400).
